SUMMARY

Full Stack Software Engineer specializing in Laravel, MERN, and Agentic AI, with experience building scalable web applications, fintech platforms, SaaS products, and AI-powered solutions. Skilled in React, Next.js, Laravel, Node.js, PostgreSQL, MongoDB, and LLM technologies, with a strong focus on backend architecture, APIs, real-time systems, and intelligent automation. Passionate about turning complex business requirements into high-performance, production-ready software.

WORK EXPERIENCE

Lead Software Engineer
Softech Solutions UK

08/2025 – Present
Lahore, Pakistan

- Led the end-to-end development of production-grade full-stack, fintech, SaaS, and AI-powered applications using React.js, TypeScript, Laravel, PHP, and PostgreSQL.
- Designed and implemented scalable RESTful APIs and backend services with Laravel, including authentication, authorization, validation, business logic, database operations, and third-party integrations.
- Built production-ready frontend applications using React.js and TypeScript with reusable component architecture, responsive interfaces, API integration, and modern frontend practices.
- Implemented real-time communication and live application features using Laravel Reverb, Laravel Echo, Pusher, and WebSockets.
- Integrated payment gateways including Cybersource, Stripe, and HBL Payment Gateway for secure payment and transaction workflows.
- Worked on PayTime, a fintech payroll platform for managing employee salary data throughout the fiscal year, payroll generation, salary slips, allowances, custom allowances, EOBI, PF, UPF, schemes, and attendance management.
- Implemented attendance-based salary deductions in PayTime according to configurable company rules and payroll workflows.
- Built the PayTime AI chatbot using n8n, Ollama, PostgreSQL, pgvector, embeddings, vector search, and Retrieval-Augmented Generation (RAG) for context-aware responses and AI-powered business workflows.
- Designed AI agent workflows using n8n and Ollama, integrating LLM processing, data retrieval, vector search, backend services, automation, and multi-step processing.
- Led development of Compito, a marketplace connecting customers with skilled workers, including profiles, communication, service requests, offers, payment workflows, and real-time interactions.
- Integrated Geoapify and Google Maps for location-based features, mapping, geographic search, and marketplace functionality.
- Led technical decisions, architecture, database modeling, debugging, optimization, code reviews, and production delivery across multiple projects.

Software Engineer
MetaX Payments Ltd

09/2024 – 08/2025
Lahore, Pakistan

- Developed fintech, banking, and full-stack web applications using Laravel, Vue.js, Inertia.js, React.js, Node.js, Express.js, MongoDB, MySQL, and modern web technologies.
- Worked on MetaX Exchange, a fintech and banking application, implementing user registration, authentication, account workflows, and core application functionality.
- Developed secure backend services and RESTful APIs using Laravel, including authentication, validation, business logic, database operations, and reusable service components.
- Built responsive frontend interfaces using Vue.js and Inertia.js, integrating frontend workflows with Laravel backend services.

- Developed MERN stack applications using React.js, Node.js, Express.js, and MongoDB for various business and product requirements.
- Built blog platforms and administrative panels with content management, user management, configuration, settings, and admin workflows.
- Designed and maintained MySQL and MongoDB data structures, CRUD operations, relationships, validation, and application data workflows.
- Integrated third-party APIs, payment services, real-time functionality, and external platforms into production applications.
- Implemented reusable frontend components, authentication flows, forms, business workflows, and full-stack application features.
- Participated in debugging, testing, performance optimization, code reviews, and production issue resolution throughout the development lifecycle.

Full Stack Developer

01/2024 – 08/2024

TP Solutions

Lahore, Pakistan

- Led the development of multiple full-stack web applications using Next.js, React.js, TypeScript, PostgreSQL, Prisma, and modern web technologies.
- Built a comprehensive School Management System supporting administrative workflows, user management, academic operations, and business processes.
- Developed an Amazon Labeling web application with custom workflows and interfaces for managing labeling-related operations.
- Designed and implemented PostgreSQL database schemas and Prisma data models with a focus on data integrity, maintainability, and efficient application workflows.
- Developed reusable frontend components, responsive interfaces, backend APIs, authentication flows, and business logic across multiple applications.
- Integrated frontend applications with backend services and implemented end-to-end features across UI, APIs, databases, and business workflows.
- Handled debugging, performance optimization, technical problem-solving, and production delivery throughout the software development lifecycle.
- Collaborated with teams and stakeholders to translate business requirements into scalable and maintainable software solutions.

Full Stack Developer

01/2024 – 08/2024

Natrix Coders

Lahore, Pakistan

- Developed and maintained responsive web applications and business websites based on client and project requirements.
- Implemented frontend interfaces, reusable components, responsive layouts, forms, interactive functionality, and third-party integrations.
- Worked across application development, debugging, maintenance, and optimization to deliver reliable web solutions.
- Collaborated with senior developers and team members to translate business requirements into practical and maintainable software features.
- Worked on frontend-backend integration, API consumption, application workflows, and database-driven functionality across multiple projects.
- Participated in debugging, testing, issue resolution, performance improvements, and ongoing application maintenance.
- Used Git-based development workflows and contributed to collaborative development and production updates.
- Supported the software development lifecycle from feature implementation and debugging through deployment and maintenance.

PROJECTS

A fintech payroll management platform for managing employee salary data throughout the fiscal year. Built payroll generation, salary slips, allowances, custom allowances, EOBI, PF, UPF, schemes, attendance management, and automated attendance-based salary deductions based on configurable company rules.

Compito compito.uk/
A marketplace platform connecting customers with skilled workers and service providers. Built user profiles, customer-worker communication, service requests, offers, payment workflows, location-based features using Google Maps and Geoapify, and real-time interactions.

UPCS
A location-sharing web application that enables users to save precise locations using postcode-based pinpoints and share them for accurate navigation and location discovery. Integrated mapping, location services, and third-party APIs for reliable location-based functionality.

You Rent yourent.uk/
A UK property marketplace for discovering, searching, and filtering property listings, exploring locations, and interacting with property deals. Built advanced Google Maps and location-based functionality, including map-driven property discovery and 3D location visualization.

MetaX Exchange metaxexchange.com/
A fintech and banking application for managing user accounts and financial workflows. Developed user registration, authentication, account functionality, backend APIs, business logic, and interactive interfaces using Laravel, Vue.js, and Inertia.js.

Darbul Umrah darbulumrah.com/
A travel and Umrah management platform for companies to manage Umrah and Hajj services, trips, agents, routes, transport companies, and business operations. Built workflows for trip management, agent coordination, transportation, invoicing, service slips, and operational documents.

EDUCATION

Bachelor of Science: Computer Science
University Of The Punjab Lahore, Pakistan

SKILLS

Frontend: React.js, Next.js, Vue.js, JavaScript (ES6+), TypeScript, Redux, Redux Toolkit, TanStack Query, React Hooks, Inertia.js, Tailwind CSS, HTML5, CSS3, Responsive UI
Backend: Laravel, PHP, Node.js, Express.js, REST APIs, WebSockets, Laravel Reverb, Laravel Echo, Pusher, JWT, OAuth, Authentication, Authorization (RBAC), API Integrations
Database: PostgreSQL, MySQL, MongoDB, Redis, pgvector, Prisma ORM, Mongoose, TypeORM, Laravel Eloquent, Database Design, Data Modeling, Query Optimization, Indexing, Transactions
Cloud & DevOps: AWS, GCP, Docker, Linux, Ubuntu, Git, GitHub, GitHub Actions, CI/CD, Production Deployment, Server Administration, Environment Configuration, SSL, Reverse Proxy
Agentic AI & LLM Eng.: AI Agents, LLM Applications, RAG, n8n, Ollama, LLM APIs, Embeddings, Vector Search, pgvector, Tool Calling, AI Workflows, LLM Integration, AI Automation
Engineering: Software Architecture, Full-Stack Development, SaaS Development, Fintech Development, Real-Time Systems, Payment Integrations, API Design, Debugging, Testing, Performance Optimization, Code Reviews, Agile
